20. Implementation Roadmap

1. Current HubSpot Integration Status

NotarDex currently has a working bidirectional HubSpot CRM integration via the hubspot-sync edge function. Here is what is already built:

1.1 What Is Already Working

Feature	Status	Location	Details
Test Connection	Working	Admin Settings	Tests HubSpot API connectivity using Bearer token auth
Push Leads	Working	Admin Settings	Pushes up to 50 leads without hubspot_contact_id to HubSpot as contacts
Pull Contacts	Working	Admin Settings	Pulls up to 50 recent HubSpot contacts into leads table
Duplicate Detection	Working	Edge Function	Searches by email before creating to avoid duplicate contacts
Rate Limit Handling	Working	Edge Function	Handles HTTP 429 with Retry-After header backoff
Contact Update	Working	Edge Function	Updates existing HubSpot contacts when email already exists
Audit Logging	Working	Edge Function	Logs push operations to audit_log table with counts
CRM Hub UI	Working	Admin CRM	7-stage Kanban pipeline with lead/contact/deal management
Lead Portal UI	Working	Admin Lead Portal	5-stage pipeline with bulk operations and lead scoring

1.2 Current Authentication Method

The integration uses a Private App access token stored as the server secret HubSpot_Service_Key (fallback: HUBSPOT_API_KEY). This is the recommended authentication method for server-to-server API calls.

To find your current token:

Step 1: Log in to HubSpot at app.hubspot.com

Step 2: Go to Settings (gear icon) → Integrations → Private Apps

Step 3: Click your NotarDex private app to view the access token

Step 4: The token is stored as HubSpot_Service_Key in Lovable Cloud secrets

1.3 Current Data Flow

PUSH: NotarDex leads table → hubspot-sync (action: push) → HubSpot Contacts API v3

PULL: HubSpot Contacts API v3 → hubspot-sync (action: pull) → NotarDex leads table

NotarDex Field	HubSpot Property	Direction	Notes
name (split)	firstname / lastname	Push & Pull	Split on first space
email	email	Push & Pull	Primary dedup key
phone	phone	Push & Pull	Raw string, no formatting
business_name	company	Push & Pull	Maps to company name

city	city	Push & Pull	
state	state	Push & Pull	Defaults to OH on pull
zip	zip	Push & Pull	
status	hs_lead_status	Push only	new→NEW, contacted→IN_PROGRESS, converted→CONNECTED
hubspot_contact_id	id	Both	Stored locally for sync tracking

2. HubSpot Free CRM Setup & Configuration

HubSpot's free CRM tier is extremely generous and includes everything NotarDex needs for a solo notary or small team. Here is how to maximize it:

2.1 Free Tier Includes

- Up to 1,000,000 contacts (unlimited)
- Contact management with timeline activity
- Deal pipeline (1 pipeline, unlimited deals)
- Task management and activity tracking
- Email tracking (200 notifications/month)
- Email templates (5 templates)
- Meeting scheduling (1 personal link)
- Forms (unlimited, with HubSpot branding)
- Live chat (1 chatflow, HubSpot branding)
- Reporting dashboard (3 dashboards, 10 reports each)
- Mobile app with business card scanner
- Gmail/Outlook integration
- Calling (built-in, limited minutes)
- Deals board (Kanban view)

2.2 Initial Setup Steps

Step 1: Sign up at hubspot.com/products/get-started-free (use your notardex.com email)

Step 2: Complete the onboarding wizard — select 'Services' as your industry

Step 3: Go to Settings → Account Defaults → set timezone to Eastern (Ohio)

Step 4: Settings → Currency → ensure USD is default

Step 5: Settings → Users & Teams → invite any team members

Step 6: Install the HubSpot mobile app on your phone

2.3 Create Private App for NotarDex API Access

Step 1: Go to Settings → Integrations → Private Apps → Create a private app

Step 2: Name it 'NotarDex Platform'

Step 3: Under Scopes, enable these permissions:

- crm.objects.contacts.read + write
- crm.objects.deals.read + write
- crm.objects.companies.read + write
- crm.schemas.contacts.read
- crm.schemas.deals.read
- crm.lists.read + write (for smart lists)
- timeline (for activity logging)

Step 4: Click Create App → copy the access token

Step 5: Store the token as HubSpot_Service_Key in Lovable Cloud secrets

⚠ *Never share this token. It grants full CRM access. Regenerate immediately if compromised.*

3. HubSpot Properties & Custom Fields

Extend HubSpot beyond default fields to capture notary-specific data. These custom properties let you segment, filter, and automate based on notarization details.

3.1 Custom Contact Properties to Create

Navigate to Settings → Properties → Contact Properties → Create Property:

Property Name	Type	Group	Description
notardex_client_id	Single-line text	Contact Info	UUID from NotarDex profiles table for cross-reference
service_type_needed	Dropdown	Contact Info	Options: Notarization, Apostille, RON, I-9, Loan Signing, Other
document_type	Dropdown	Contact Info	Options: Power of Attorney, Real Estate, Affidavit, Trust, Will, Medical, I-9, Other
ohio_county	Dropdown	Contact Info	All 88 Ohio counties for geographic targeting
preferred_session_type	Radio	Contact Info	Options: In-Person, Remote (RON), Mobile Notary
ron_eligible	Checkbox	Contact Info	Whether the client's document qualifies for Remote Online Notarization
appointment_count	Number	Contact Info	Total completed appointments (updated by sync)
total_revenue	Number (Currency)	Contact Info	Lifetime revenue from this client
last_service_date	Date	Contact Info	Date of most recent notarization
referral_source	Dropdown	Contact Info	Options: Google, Yelp, Referral, NotaryCafe, Fiverr, Walk-in, Website
notary_notes	Multi-line text	Contact Info	Internal notes from notary about client needs
id_verified	Checkbox	Contact Info	Whether the client has passed KBA/ID verification
business_account	Checkbox	Contact Info	Whether this is a business portal account

3.2 Custom Deal Properties

Property Name	Type	Description
notarization_type	Dropdown	Acknowledgment, Jurat, Copy Certification, Oath, Signature Witnessing
document_count	Number	Number of documents in the signing
session_type	Radio	In-Person, RON, Mobile
appointment_date	Date	Scheduled appointment date/time
notardex_appointment_id	Text	UUID from appointments table
ohio_compliance_status	Dropdown	Pending, Verified, Completed, Issue Found
recording_url	Text	URL to RON session recording (for compliance)
journal_entry_id	Text	UUID from notary_journal table

3.3 How to Create Custom Properties via API

You can also create these programmatically. Here is the API call format:

```
POST https://api.hubapi.com/crm/v3/properties/contacts
Authorization: Bearer {HubSpot_Service_Key}
Body: { name: 'service_type_needed', label: 'Service Type Needed',
  type: 'enumeration', fieldType: 'select', groupName: 'contactinformation',
  options: [{ label: 'Notarization', value: 'notarization' }, ...] }
```

4. NotarDex ↔ HubSpot Enhanced Data Mapping

Beyond the current basic field mapping, here is the complete enhanced mapping that should be implemented:

NotarDex Source	Table	HubSpot Object	HubSpot Property	Sync Direction
profiles.full_name	profiles	Contact	firstname/lastname	Bi-directional
profiles.email	profiles	Contact	email	Bi-directional
profiles.phone	profiles	Contact	phone	Bi-directional
appointments.date	appointments	Deal	appointment_date	Push
appointments.service_type	appointments	Deal	dealname	Push
appointments.status	appointments	Deal	dealstage	Push
payments.amount	payments	Deal	amount	Push
payments.status	payments	Deal	closedate	Push (when paid)
notary_journal.fees_charged	notary_journal	Deal	amount (update)	Push
service_requests.service_name	service_requests	Deal	dealname	Push
client_feedback.rating	client_feedback	Contact	hs_content_membership_notes	Push
documents.type	documents	Note	Activity note	Push
chat_messages.message	chat_messages	Activity	Timeline event	Push

5. Advanced HubSpot Features (Free Tier)

5.1 Smart Lists (Static & Active)

Create lists to segment your contacts for targeted communication and workflow triggers:

List Name	Type	Filter Criteria	Use Case
RON-Ready Clients	Active	ron_eligible = true AND preferred_session_type = RON	Target for RON promotions
High-Value Clients	Active	total_revenue > $500 OR appointment_count > 5	VIP treatment, priority scheduling
Stale Leads (30 days)	Active	Last activity > 30 days AND hs_lead_status = NEW	Re-engagement campaigns
Business Accounts	Active	business_account = true	B2B pricing and bulk offers
Apostille Clients	Active	service_type_needed = Apostille	Apostille-specific updates
Real Estate Contacts	Active	document_type = Real Estate	Loan signing upsells
Fiverr Leads	Static	referral_source = Fiverr	Track Fiverr conversion rate
NotaryCafe Leads	Static	referral_source = NotaryCafe	Track NotaryCafe ROI
Inactive 90 Days	Active	Last activity > 90 days	Win-back campaign
Ohio County: Franklin	Active	ohio_county = Franklin	Local marketing

5.2 Email Templates (Free: 5 templates)

Maximize your 5 free templates with these high-impact options:

- Template 1: New Lead Welcome — 'Thank you for reaching out to NotarDex! Here is what to expect...'
- Template 2: Appointment Reminder — 'Your notarization appointment is coming up. Here is how to prepare...'
- Template 3: Post-Service Follow-Up — 'Your document has been notarized. Here is your next steps...' + review request
- Template 4: Re-Engagement — 'We noticed you started but did not complete your booking. Can we help?'
- Template 5: Business Proposal — 'Thank you for considering NotarDex for your business notarization needs. Our packages include...'

Pro Tip: *Use personalization tokens like {{contact.firstname}}, {{deal.dealname}}, and {{contact.service_type_needed}} in every template.*

5.3 Meeting Scheduler

HubSpot includes a free meeting scheduler that can replace or supplement your booking page:

Step 1: Go to Sales → Meetings → Create scheduling page

Step 2: Set your availability to match your NotarDex availability settings

Step 3: Add custom questions: document type, session preference, urgency level

Step 4: Share the link on your website, email signature, and social profiles

Step 5: Any meeting booked auto-creates a contact in HubSpot

Pro Tip: *Add the HubSpot meeting link as a backup option on your NotarDex booking confirmation page for clients who want to schedule additional services.*

5.4 HubSpot Calling

The free tier includes limited calling minutes directly from HubSpot:

- Click-to-call from any contact record
- Calls are automatically logged to the contact timeline
- Record calls for compliance documentation (check Ohio consent laws)
- Add call outcome and notes that sync to the CRM

⚠ *Ohio is a one-party consent state for recording, but always disclose recording for professional best practice.*

6. HubSpot + Gmail Integration

Connect Gmail to HubSpot for seamless email tracking, logging, and CRM updates.

6.1 Setup Steps

Step 1: In HubSpot: Settings → General → Email → Connect personal email

Step 2: Select Google/Gmail and authorize

Step 3: Enable 'Log and track emails' by default

Step 4: Install the HubSpot Sales Chrome extension for Gmail

6.2 What This Gives You

- Email open tracking — know when a client reads your appointment confirmation
- Email click tracking — know when they click your booking link
- Automatic logging — all emails to/from CRM contacts appear on their timeline
- Send from HubSpot — compose emails from contact records using your Gmail address
- Templates in Gmail — use your 5 HubSpot templates directly from the Gmail compose window
- BCC to CRM — forward any email to your HubSpot BCC address to log it

6.3 Gmail + NotarDex Workflow

Here is how Gmail, HubSpot, and NotarDex work together:

- 1. Lead submits form on NotarDex → lead created in leads table
- 2. Push sync sends lead to HubSpot as contact
- 3. You email the contact from Gmail → HubSpot tracks open/click
- 4. Contact replies → logged to HubSpot timeline automatically
- 5. You book them through NotarDex → appointment syncs as deal
- 6. Post-service follow-up from Gmail → tracked in HubSpot

6.4 Gmail-Specific Tricks

- Create Gmail filters to auto-label emails from HubSpot contacts
- Use Gmail's 'Schedule Send' to time follow-ups for business hours
- Set up Gmail canned responses (Settings → Advanced) for quick replies like 'Documents received, your appointment is confirmed'
- Use HubSpot's email scheduling to send at optimal times (Tuesday 10 AM has highest open rates)
- Create a Gmail signature with your HubSpot meeting link included

7. HubSpot + Fiverr Integration Workflows

Fiverr is a key lead source for notary services. Here is how to integrate it with HubSpot for tracking and follow-up:

7.1 Fiverr-to-HubSpot Manual Workflow

Since Fiverr does not have a native HubSpot integration, use this process:

Step 1: When you receive a Fiverr order, manually create a HubSpot contact with the buyer's email

Step 2: Set referral_source = 'Fiverr' and service_type_needed to match the gig

Step 3: Create a Deal in your pipeline tied to the Fiverr order amount

Step 4: Add the Fiverr order number as a note on the contact

Step 5: After delivery, send your HubSpot follow-up template requesting a review on Fiverr

7.2 Fiverr-to-HubSpot Automated Workflow (via Zapier)

Use Zapier (free tier) to automate Fiverr order capture:

Step 1: Create a Zap: Trigger = 'New Email' in Gmail (filter: from:fiverr.com subject:'New Order')

Step 2: Action 1: Parse the email using Zapier's 'Formatter' to extract buyer name, email, and order details

Step 3: Action 2: Create/Update Contact in HubSpot with parsed data

Step 4: Action 3: Create Deal in HubSpot with Fiverr order amount

Pro Tip: *Set the deal pipeline stage to 'Appointment Scheduled' since Fiverr orders are already confirmed.*

7.3 Fiverr Gigs That Map to NotarDex Services

Fiverr Gig	NotarDex Service	HubSpot Deal Stage	Typical Price
Remote Online Notarization	RON Session	Appointment Scheduled	$25-75
Document Notarization	Standard Notarization	Appointment Scheduled	$15-50
Apostille Processing	Apostille Service	Documents Received	$75-200
I-9 Verification	I-9 Verification	Appointment Scheduled	$25-50
Notarized Letter	Document Preparation + Notarization	In Progress	$30-75
Affidavit Notarization	Affidavit Notarization	Appointment Scheduled	$25-50
Loan Signing	Loan Signing	Documents Received	$100-200

7.4 Fiverr Upsell Strategy via HubSpot

Use HubSpot to turn one-time Fiverr clients into repeat NotarDex customers:

- After completing a Fiverr order, send HubSpot follow-up template with a direct booking link to NotarDex
- Offer a 10% discount code for their next booking through your website (bypasses Fiverr fees)
- Add them to the 'Fiverr Leads' smart list and send monthly newsletters about new services
- Track Fiverr conversion rate in HubSpot by filtering deals where referral_source = Fiverr

8. HubSpot + NotaryCafe Integration

NotaryCafe is the largest notary signing service marketplace. Integrate with HubSpot to track leads and assignments:

8.1 NotaryCafe-to-HubSpot Workflow

Step 1: When you receive a signing assignment notification from NotaryCafe, forward the email to your HubSpot BCC address

Step 2: The email is logged to HubSpot. Create a contact for the signing company if one does not exist

Step 3: Create a Deal: dealname = 'Signing Assignment - [Company Name]', amount = signing fee

Step 4: Set custom properties: session_type = 'Mobile' or 'In-Person', document_type = 'Loan Signing'

Step 5: Move through pipeline stages as you progress: Accepted → Confirmed → Completed → Invoice Sent → Paid

8.2 NotaryCafe-Specific HubSpot Setup

Create a separate deal pipeline for NotaryCafe assignments:

Step 1: Go to Settings → Objects → Deals → Pipelines → Create Pipeline

Step 2: Name it 'Signing Service Assignments'

Step 3: Stages: Offered → Accepted → Docs Received → Completed → Invoice Sent → Paid

⚠ *Free HubSpot only allows 1 deal pipeline. You must use the Starter plan ($20/mo) for a second pipeline, OR use a 'Pipeline' custom property to tag deals as 'Direct' vs 'NotaryCafe' within a single pipeline.*

8.3 Tracking NotaryCafe Revenue

- Tag every NotaryCafe-sourced deal with referral_source = 'NotaryCafe'
- Create a dashboard report: Revenue by Source → compare NotaryCafe vs Direct vs Fiverr
- Track average signing fee, completion rate, and payment timeline per signing company
- Identify which signing companies pay fastest and offer the best fees

8.4 NotaryCafe → NotarDex → HubSpot Automation

Use Zapier to automate NotaryCafe email notifications:

Step 1: Zapier Trigger: New Email in Gmail matching 'from:notarycafe.com subject:signing'

Step 2: Zapier Parser: Extract company name, address, date, fee from email body

Step 3: Zapier Action: Create HubSpot Deal with extracted data

Step 4: Zapier Action: Create NotarDex appointment via submit-lead edge function webhook

9. HubSpot + Zapier Free Automations

Zapier's free tier gives you 5 Zaps with 100 tasks/month. Here are the highest-impact automations for a notary business:

9.1 Top 5 Free Zaps for NotarDex

Zap 1: New NotarDex Lead → HubSpot Contact + Slack Notification

Trigger: Webhook (NotarDex submit-lead edge function calls your Zapier webhook URL)

Action 1: Create/Update HubSpot Contact with lead data

Action 2: Send Slack/Email notification 'New lead: {{name}} needs {{service_type}}'

```
Webhook URL: https://hooks.zapier.com/hooks/catch/YOUR_ZAP_ID/
NotarDex submit-lead can POST to this URL in addition to creating the database row
```

Zap 2: HubSpot Deal Closed → Google Sheet Revenue Tracker

Trigger: HubSpot Deal stage changed to 'Closed Won'

Action: Add row to Google Sheet with deal name, amount, close date, source

> **Pro Tip:** *This creates a free revenue dashboard in Google Sheets with charts, bypassing HubSpot's reporting limits.*

Zap 3: New Google Review → HubSpot Contact Note

Trigger: New Google Business review (via Google My Business → Zapier)

Action: Search HubSpot for reviewer email, add note with review text and rating

> **Pro Tip:** *This helps you identify which clients leave reviews and which need nudging.*

Zap 4: Fiverr Order Email → HubSpot Deal

Trigger: Gmail new email from fiverr.com with subject containing 'New Order'

Action: Parse email, create HubSpot contact and deal with Fiverr order data

Zap 5: Calendar Event → HubSpot Activity

Trigger: New Google Calendar event (appointment booking)

Action: Create HubSpot engagement/activity on the matching contact

9.2 Zapier Webhook Integration with NotarDex

To connect Zapier webhooks to NotarDex, add the Zapier webhook URL to the submit-lead flow:

```
// In submit-lead edge function, after successful lead insert:
const zapierUrl = Deno.env.get('ZAPIER_WEBHOOK_URL');
if (zapierUrl) {
  await fetch(zapierUrl, {
    method: 'POST',
    headers: { 'Content-Type': 'application/json' },
    body: JSON.stringify({ name, email, phone, service_needed })
  });
}
```

9.3 Free Zapier Alternatives

- Make.com (formerly Integromat) — Free tier: 1,000 operations/month, more complex logic
- n8n (self-hosted) — Free and open source, unlimited workflows, requires hosting
- IFTTT — Free tier: 2 applets, simpler triggers but limited actions
- Pipedream — Free tier: 10,000 invocations/month, code-based workflows

Recommendation: *Start with Zapier free (5 Zaps). When you need more, switch to Make.com free tier which offers 10x more operations.*

10. HubSpot Sequences & Email Templates

Create email sequences to automate follow-up cadences. Free tier allows 5 templates; use them wisely:

10.1 Recommended Email Sequence: New Lead Nurture

Day	Email	Subject Line	Content Focus
Day 0	Welcome	Your Notarization Questions Answered	Welcome, what NotarDex offers, link to FAQ
Day 2	Value Add	3 Things to Know Before Your Notarization	Preparation tips, ID requirements, what to bring
Day 5	Soft CTA	Ready to Schedule? Here Is Your Direct Link	Booking link, fee estimate, available times
Day 10	Social Proof	See What Our Clients Say	Testimonials, review count, trust badges
Day 20	Final Touch	Special Offer for First-Time Clients	10% discount, urgency, expiry date

10.2 Post-Service Sequence

Day	Email	Content
Day 0	Completion Confirmation	Signed docs attached/linked, receipt, e-seal verification URL
Day 3	Review Request	Google review link, 'How did we do?' with star rating shortcut
Day 14	Cross-Sell	Other services they might need (apostille, certified copies, additional docs)
Day 30	Referral Ask	Referral program details, shareable link

11. HubSpot Deals Pipeline for Notary Services

Configure your deal pipeline to mirror the notarization workflow:

11.1 Recommended Pipeline Stages

Stage	Probability	Description	Trigger
Lead Received	10%	Initial inquiry or form submission	Auto: new lead created
Contacted	20%	First outreach made by phone/email	Manual: notary marks contacted
Qualified	40%	Client confirmed they need service, eligible	Manual: after needs assessment
Documents Received	60%	Client has submitted required documents	Auto: document uploaded
Appointment Scheduled	80%	Booking confirmed with date/time	Auto: appointment created
In Session	90%	Active notarization session	Auto: RON session started
Completed	100%	Service delivered, docs signed	Auto: session finalized
Invoiced	100%	Payment requested	Auto: invoice generated
Closed Won	100%	Payment received	Auto: Stripe payment confirmed
Closed Lost	0%	Did not proceed	Manual: with reason code

11.2 Deal Pipeline Automation Ideas

- When deal moves to 'Appointment Scheduled', auto-send preparation email template
- When deal moves to 'Completed', auto-create task: 'Send follow-up in 3 days'
- When deal is 'Closed Won', update contact properties: increment appointment_count, update total_revenue
- When deal is 'Closed Lost', create task: 'Follow up in 30 days to re-engage'
- Weekly report: deals stuck in 'Contacted' for >7 days need attention

12. HubSpot Forms & Landing Pages

Use HubSpot's free form builder to capture leads from multiple channels:

12.1 Forms to Create

Form Name	Fields	Where to Embed	Use Case
Quick Notarization Quote	Name, Email, Document Type, Session Pref	Website sidebar	Fast lead capture
Business Account Inquiry	Company, Name, Email, Volume Estimate	Solutions pages	B2B lead gen
RON Eligibility Check	State, Document Type, Email	RON info page	Qualified RON leads
Newsletter Signup	Email, First Name	Footer, blog	Build email list
Feedback Form	Name, Email, Rating, Comments	Post-service email	Collect testimonials

12.2 Embedding HubSpot Forms in NotarDex

HubSpot provides embed codes for each form. To add a HubSpot form to NotarDex:

```
<script charset='utf-8' type='text/javascript'
  src='//js.hsforms.net/forms/embed/v2.js'>
</script>
<script>hbspt.forms.create({
  portalId: 'YOUR_PORTAL_ID',
  formId: 'YOUR_FORM_ID'
});</script>
```

⚠ *For React: use the @hubspot/api-client npm package or load the script dynamically in a useEffect hook. HubSpot forms auto-create contacts, so leads flow into HubSpot without any NotarDex sync needed.*

13. HubSpot Chatbot & Live Chat

HubSpot's free chatbot can serve as a 24/7 lead qualifier on your website:

13.1 Chatbot Flow for Notary Services

Step 1: Go to Conversations → Chatflows → Create chatflow

Step 2: Select 'Bot' and use the 'Qualify Leads' template

Step 3: Customize the conversation flow:

- Welcome: 'Hi! I can help you with notarization services. What do you need?'
- Question 1: 'What type of document needs notarization?' (multiple choice: Power of Attorney, Real Estate, Affidavit, I-9, Other)
- Question 2: 'Do you prefer in-person or remote (RON) notarization?'
- Question 3: 'When do you need this completed?' (Today, This Week, No Rush)
- Question 4: 'What is the best email to reach you?'
- Ending: 'Thank you! I will have someone reach out within [time]. You can also book directly at [booking link].'

Step 4: The chatbot auto-creates a HubSpot contact with all collected data

Step 5: Assign the chat to yourself for live takeover during business hours

13.2 Live Chat During Business Hours

Configure the chatbot to route to live chat during your working hours:

- Set business hours: Mon-Fri 9 AM - 6 PM ET (or your NotarDex availability hours)
- During hours: bot qualifies, then routes to you for live conversation
- After hours: bot collects info and creates ticket for morning follow-up
- All conversations are logged to the contact's HubSpot timeline

13.3 Embedding HubSpot Chat in NotarDex

Add the HubSpot tracking code to your index.html:

```
<!-- HubSpot Chat Widget -->
<script type='text/javascript' id='hs-script-loader' async defer
  src='//js.hs-scripts.com/YOUR_PORTAL_ID.js'>
</script>
```

Pro Tip: *This also enables HubSpot analytics tracking on your site, giving you visitor data, page views, and session recordings.*

14. HubSpot Reporting & Dashboards

Free tier: 3 dashboards, 10 reports per dashboard. Here is the optimal configuration:

14.1 Dashboard 1: Sales Overview

Report	Type	What It Shows
Deal Revenue by Source	Bar Chart	Fiverr vs NotaryCafe vs Direct vs Website revenue
Deal Pipeline Funnel	Funnel	Conversion rate from Lead → Closed Won
Deals Closed This Month	Number	Total closed deals and revenue this month
Average Deal Size	Number	Average notarization fee
Lead Response Time	Number	Average time from lead creation to first contact
Deals by Service Type	Pie Chart	RON vs In-Person vs Mobile vs Apostille

14.2 Dashboard 2: Lead Management

Report	Type	What It Shows
New Leads This Week	Number	Incoming lead volume trend
Lead Source Breakdown	Pie Chart	Where leads come from
Leads by Stage	Bar Chart	Pipeline distribution
Stale Leads (>7 days no contact)	Table	Leads needing attention
Lead-to-Customer Rate	Number	Conversion percentage

14.3 Dashboard 3: Activity & Productivity

Report	Type	What It Shows
Emails Sent/Received	Line Chart	Communication volume over time
Tasks Completed	Number	Follow-ups and to-dos done
Calls Logged	Number	Phone activity
Meetings Booked	Number	Appointments scheduled via HubSpot
Average Session Duration	Number	Time per notarization (from deals)

15. HubSpot Mobile App Tricks

The HubSpot mobile app is a powerful tool for notaries who are frequently mobile:

15.1 Business Card Scanner

- Open the HubSpot app → tap '+' → Scan Business Card
- AI automatically extracts name, email, phone, company
- Creates a new contact instantly
- Use at networking events, Chamber of Commerce meetings, real estate offices

Pro Tip: *After scanning, immediately add referral_source = 'Networking' and the event name as a note.*

15.2 Mobile Call Logging

- Before calling a client, open their contact in the HubSpot app
- Tap 'Call' to dial through HubSpot — the call is auto-logged
- After the call, add an outcome (Connected, Left Voicemail, No Answer) and notes
- This builds a complete communication timeline without manual entry

15.3 Quick Contact Creation on the Go

- After a mobile notarization, create the contact in HubSpot immediately
- Add the appointment details, fee, and any follow-up needed
- Take a photo of documents (not content — just for reference) and attach to the contact
- Create a task for yourself: 'Upload journal entry for [client] by end of day'

15.4 Mobile Notifications

- Enable push notifications for: new form submissions, chat messages, email opens
- Get instant alerts when a high-value lead submits a form
- Respond to live chat from your phone while doing mobile signings

16. Advanced Implementation: Webhooks & Workflows

For deeper integration, implement HubSpot webhooks to receive real-time updates in NotarDex:

16.1 HubSpot Webhook Subscriptions

Create a HubSpot webhook endpoint in NotarDex to receive events:

```
// New edge function: hubspot-webhook/index.ts
// Receives events when contacts, deals, or properties change in HubSpot
// Verifies the X-HubSpot-Signature header for security
// Processes: contact.creation, contact.propertyChange, deal.creation,
deal.propertyChange
```

Events to subscribe to:

Event	Use Case	NotarDex Action
contact.creation	New contact added in HubSpot	Create lead in leads table
contact.propertyChange (email)	Email updated	Update lead email
contact.propertyChange (hs_lead_status)	Status changed	Update lead status
deal.creation	New deal created	Create service_request
deal.propertyChange (dealstage)	Deal stage changed	Update appointment status
deal.propertyChange (amount)	Price changed	Update payment amount
deal.deletion	Deal removed	Log to audit_log

16.2 HubSpot Workflows (Starter Plan Required)

If you upgrade to HubSpot Starter ($20/month), you get workflow automation:

- Auto-assign leads based on service_type (RON → you, Loan Signing → specific notary)
- Auto-create tasks when deals stay in a stage for too long
- Auto-send email sequences based on lifecycle stage changes
- Auto-rotate leads if you have a team of notaries
- Auto-update deal properties when associated contact properties change

16.3 HubSpot API Endpoints to Implement

Endpoint	Method	Use Case
crm/v3/objects/deals	POST	Create deal when appointment is booked
crm/v3/objects/deals/{id}	PATCH	Update deal when appointment status changes
crm/v3/objects/deals/{id}/associations/contacts	PUT	Link deal to contact
crm/v3/objects/notes	POST	Add activity notes from session
crm/v3/objects/tasks	POST	Create follow-up tasks
crm/v3/objects/contacts/search	POST	Find contact by email or phone
crm/v3/timeline/events	POST	Custom timeline events for notarizations
crm/v3/objects/companies	POST	Create company for business accounts

crm/v3/associations/contacts/companies	PUT	Link contacts to companies

17. NotarDex Edge Function Enhancements

Here are the specific enhancements needed for the hubspot-sync edge function to unlock full functionality:

17.1 Current Gaps in hubspot-sync

Gap	Impact	Fix
No JWT authentication	Any anonymous request can trigger sync	Add Authorization header verification
No deal syncing	Appointments are not pushed as deals	Add action: 'push-deals' to create HubSpot deals from appointments
No company syncing	Business accounts are not synced	Add action: 'push-companies' from business_accounts table
No activity logging	Session completions not on timeline	Add Timeline Event API calls after session finalization
No incremental sync	Pull always fetches last 50	Use 'since' timestamp for incremental pulls
No webhook receiver	Changes in HubSpot are not reflected	Create hubspot-webhook edge function
No batch API	50 sequential API calls on push	Use HubSpot Batch API for bulk operations
No property sync	Custom properties not pushed	Map service_type, appointment_count to custom properties
CORS wildcard	Security risk	Restrict to notary-prime-hub.lovable.app

17.2 Enhanced Push Action (Code Outline)

Extend the push action to include appointment-to-deal sync:

```
if (action === 'push-deals') {
  const { data: appointments } = await supabase
    .from('appointments')
    .select('*, profiles!appointments_client_id_fkey(email, full_name)')
    .is('hubspot_deal_id', null)
    .order('created_at', { ascending: false }).limit(50);

  for (const appt of appointments) {
    // Find or create HubSpot contact
    const contactId = await findOrCreateContact(appt.profiles);
    // Create deal
    const deal = await createDeal({
      dealname: `${appt.service_type} - ${appt.profiles.full_name}`,
      amount: appt.total_price,
      dealstage: mapStage(appt.status),
      closedate: appt.date,
    });
    // Associate deal with contact
    await associateDealContact(deal.id, contactId);
    // Update appointment with HubSpot deal ID
    await supabase.from('appointments')
```

```
            .update({ hubspot_deal_id: deal.id }).eq('id', appt.id);
        }
    }
```

17.3 Webhook Receiver (New Edge Function)

Create supabase/functions/hubspot-webhook/index.ts to receive HubSpot events:

```
// Verify X-HubSpot-Signature using HMAC SHA-256
// Parse event type and object ID
// Update corresponding NotarDex table
// Log to audit_log for compliance
```

18. Integration Architecture Diagram

Here is the complete data flow between all platforms:

```
+-------------------+     +-------------------+     +-------------------+
|    NOTARDEX       |<--->|     HUBSPOT       |<--->|      GMAIL        |
|   (Platform)      |     |    (CRM Hub)      |     | (Email Tracking)  |
+-------------------+     +-------------------+     +-------------------+
  |  Push/Pull API        |  Embed/Widget           |  BCC Forward
  |                       |                         |
  v                       v                         v
+-------------------+     +-------------------+     +-------------------+
|     ZAPIER        |     |  HUBSPOT FORMS    |     |   GOOGLE SHEETS   |
| (Automation Hub)  |     | (Lead Capture)    |     | (Revenue Tracker) |
+-------------------+     +-------------------+     +-------------------+
  |  Webhook              |  Auto-Contact           |  Zapier Write
  |                       |                         |
  v                       v                         v
+-------------------+     +-------------------+     +-------------------+
|     FIVERR        |     |   NOTARYCAFE      |     |  GOOGLE CALENDAR  |
| (Order Emails)    |     | (Signing Assign)  |     | (Scheduling)      |
+-------------------+     +-------------------+     +-------------------+
```

19. Troubleshooting & Common Issues

Problem	Cause	Solution
Push returns 0 leads	All leads already have hubspot_contact_id	Check leads table; use 'Pull' to sync from HubSpot first
401 Unauthorized	Token expired or incorrect	Regenerate Private App token and update HubSpot_Service_Key secret
429 Rate Limit	Too many API calls (100/10sec free tier)	Reduce batch size or add delay between calls
Duplicate contacts in HubSpot	Email search failed before create	Enable HubSpot dedupe settings; check search API response
Missing properties on contact	Custom properties not created	Create properties in HubSpot Settings → Properties first
Webhook not received	URL not configured or network issue	Test webhook URL with curl; check edge function logs
Gmail not logging emails	Extension not installed or disabled	Reinstall HubSpot Sales Chrome extension
Zapier Zap not triggering	Gmail filter too broad/narrow	Test with manual trigger; check Zapier Task History
Form embed not showing	Script blocked or portal ID wrong	Check browser console; verify portal ID
Chat widget not appearing	Tracking code not in index.html	Add hs-scripts.com script tag to public/index.html
Deals not associating	No email match between contact and deal	Ensure deal is associated via API, not just by name
Reports showing $0	Deal amount not set	Update deal amount when payment is processed

20. Implementation Roadmap

Prioritized plan to maximize HubSpot value with NotarDex:

Week 1: Foundation

Task	Effort	Impact
Create all custom contact properties (Section 3)	1 hour	Enables segmentation
Create custom deal properties	30 min	Enables deal tracking
Connect Gmail to HubSpot (Section 6)	15 min	Email tracking immediately
Install HubSpot mobile app	5 min	Mobile CRM access
Set up HubSpot meeting scheduler	20 min	Alternative booking channel

Week 2: Automation

Task	Effort	Impact
Create Zapier account and first Zap (lead notification)	30 min	Real-time lead alerts
Create 5 email templates in HubSpot	1 hour	Consistent communication
Configure deal pipeline stages (Section 11)	30 min	Visual sales tracking
Set up HubSpot chatbot (Section 13)	1 hour	24/7 lead qualification
Create 3 smart lists (Section 5)	30 min	Targeted outreach

Week 3: Integration

Task	Effort	Impact
Set up Fiverr-to-HubSpot Zap (Section 7)	45 min	Auto-capture Fiverr clients
Configure NotaryCafe email forwarding (Section 8)	15 min	Track signing assignments
Create 3 dashboards with reports (Section 14)	1 hour	Data-driven decisions
Embed HubSpot chat widget in NotarDex	30 min	Capture website visitors
Test full lead-to-close pipeline flow	30 min	Verify end-to-end

Week 4: Advanced

Task	Effort	Impact
Add JWT auth to hubspot-sync edge function	2 hours	Security hardening
Implement deal sync (push-deals action)	4 hours	Appointment-deal pipeline
Create hubspot-webhook edge function	4 hours	Real-time bidirectional sync
Add Zapier webhook to submit-lead	1 hour	Automated lead processing
Set up Google Sheets revenue tracker Zap	30 min	Free revenue reporting

Total Estimated Investment

- Setup time: ~15-20 hours over 4 weeks
- Monthly cost: $0 (all free tiers)
- Optional upgrade: HubSpot Starter $20/month for workflows
- Expected ROI: 30-50% more leads converted through automated follow-up

Appendix: HubSpot API Quick Reference

Action	Method	Endpoint	Auth Header
List contacts	GET	/crm/v3/objects/contacts	Bearer {token}
Create contact	POST	/crm/v3/objects/contacts	Bearer {token}
Update contact	PATCH	/crm/v3/objects/contacts/{id}	Bearer {token}
Search contacts	POST	/crm/v3/objects/contacts/search	Bearer {token}
Create deal	POST	/crm/v3/objects/deals	Bearer {token}
Update deal	PATCH	/crm/v3/objects/deals/{id}	Bearer {token}
Associate deal+contact	PUT	/crm/v3/associations/deals/contacts/batch/create	Bearer {token}
Create note	POST	/crm/v3/objects/notes	Bearer {token}
Create task	POST	/crm/v3/objects/tasks	Bearer {token}
Batch create contacts	POST	/crm/v3/objects/contacts/batch/create	Bearer {token}
Get pipelines	GET	/crm/v3/pipelines/deals	Bearer {token}
Create property	POST	/crm/v3/properties/contacts	Bearer {token}
